1. Munitions Factories

- a. There is a munitions factory making bombs for aircraft about five or six kilometers northeast of the center of Ploesti. The Director is a Soviet engineer. About 2000 Rumanian and Soviet employees work in three shifts producing about 100 bombs weekly. The bombs, however, are filled at an underground loading plant at Bucharest.
- b. A plant for loading machine gun and antiaircraft machine gun cartridges began operation in January 1951 near the Obor railroad station (Bucharest). Reportedly, in three days, ten or fifteen trucks loaded with cases of filled ammunition were sent from the plant to the Munitions depot (Catelu), five kilometers northwest of the ammunition plant.
2. A factory for constructing V-1 and V-2 rockets has been built in the solid rock of a hill about three kilometers northeast of the Petrosani railroad station.
3. A high tension line is being constructed between Baicoi and Campina. A hydroelectric power plant, located five kilometers northwest of Baicoi, was completed in 1951. The plant is equipped with Hungarian machinery and uses the water of the Doftana River.
